# EEL 4915 Senior Design 2
# Midterm Demo

**Presenter:** Please upload your video to YouTube and then copy and paste the video link into this form. Please make sure that your video is accessible before you submit this form.

***Group Number:*** 3

***Project Title:*** RF Energy Harvesting for Environmental Sensing

***Midterm Demo Video Link:*** https://youtu.be/tsPZj5X5FgQ?si=U9yEmhUgOkCwD7YJ

---------- *to be filled by Senior Design coordinator* ----------

| | *Comments/Questions* | *Video Time* |
|---|---|---|
| 1) | Minimize presentation on slides as these contents are presented in the other (presentation) video. | 0:26 – 1:18 |
| 2) | Present this table right before you begin specs demo. | 1:19 – 1:37 |
| 3) | For your final demo, begin with an overall view of your complete prototype. Then, walk through the entire system and introduce each major component or subsystem, highlighting its mounting location and explaining its function. Also, present a detailed overview of your PCBs. Use live commentary with finger pointing or on-screen labels to identify each part. This is to help direct attention and enhance understanding. | 0:26 |
| 4) | For your final demo, after overview, demo full functionality of your project. Present the test setup and record the entire test in a detailed manner in real time using live commentary. Use cameras to record live actions and/or screen capture to record on-screen contents, and then employ picture-in-picture (PIP) to present simultaneous events. | |
| 5) | How is SX 1262 connected to the Yagi Uda antenna? | 2:32 |
| 6) | Are you using a Yagi Uda antenna at the receiver side? | 3:00 |
| 7) | Take measurements at multiple temperature and humidity levels. | 4:53 |
| 8) | Use a camera to film the live action and another device to record the on-screen content, and then employ picture-in-picture (PIP) to present simultaneous events. | 7:42 – 8:12 |

| | | |
|---|---|---|
| 9) | Explicitly state the transmission power. | 8:14 |
| 10) | Perform testing under different configurations, i.e. different distance, transmission power, etc | 8:14 |
| 11) | 99% efficiency? Really? | 9:30 – 10:03 |
| 12) | Status of all PCBs? Have you performed any test on the PCBs? Have you performed troubleshooting? Have you figured out all the problems? | |
| 13) | Have all regulator boards been tested with an electronic load? Record the tests live. | |
| 14) | What is the latest progress with user input, housing, etc.? | |
